• EMM-Check - Release 4.0.6.0 available

The new release 4.0.6.0 will be published on 3rd of July 2015. Beside new features like

- the model preparation for cleaning and reducing the model data
- the update notification after the start of EMM-Check when a new version is available
- the new evaluation option for the sectors and RBs of the ISO 5006:2006

and the new standard DIN EN 16307 (for forklift trucks) - we would like to inform you about an important change in the evaluation of the analysis results according to ISO 5006:2006:

In close cooperation with our customers, the evaluation according to chapter 10.1 of the ISO 5006:2006 has been updated. The distances of maskings on sector borders to their adjacent maskings will now be checked and the maskings will be merged to one masking if the distance is too small.

• EMM-Check 4 - Customer Days

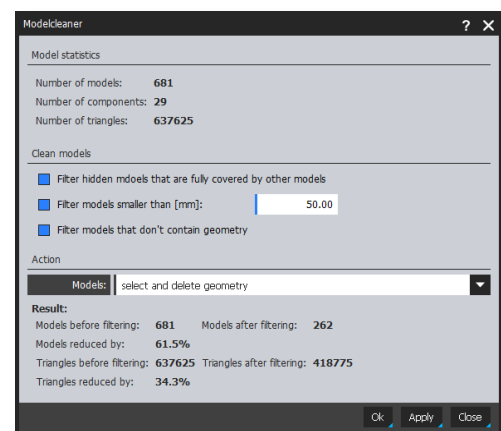

We sent out the invitations for the **EMM-Check 4** customer days in 2015 (refer chapter "Save the date"). Since the German Federal Post Office is on strike, the invitations may not have been reached you yet. So, we extended the application deadline till the 15th of August 2015.

If you haven't received your invitation yet, you can register anytime by phone (+49 (0)40 98 76 00 02) or mail (emm-check@reknow.de).

• Model preparation - better performance

A new function "Model Preparation" is available in the latest release 4.0.6.0. The function allows a reduction of the model structure to the "relevant" models. Models that are completely covered by other models or models smaller than a given size can be filtered out. The filtered models can be selected, hidden or deleted.

The function can be used to clean large model structures e.g. coming from a JT-import. We are planning to improve the function to also work on STL-files.

- **Update of REKNOW License Server (RLS)**

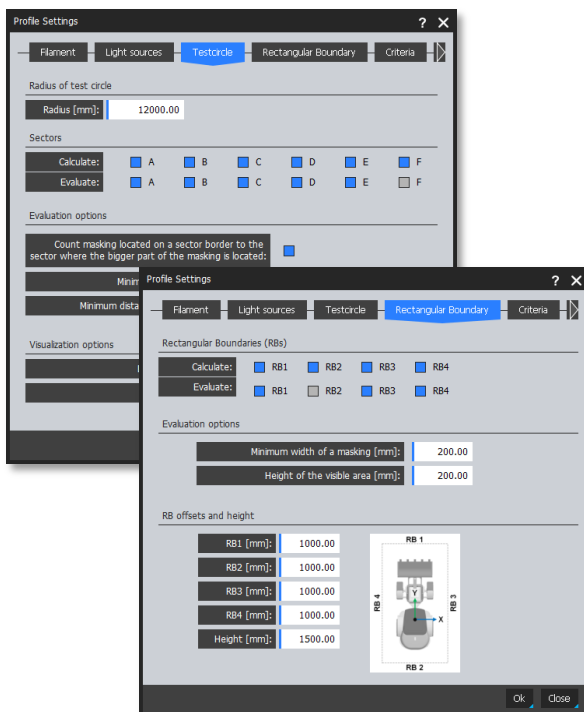

As announced in the last *Panorama*, the concurrent offline licensing is now available with **EMM-Check 4**. The concurrent offline licensing allows you to check out floating licenses from the REKNOW License Server and use them locally without a network connection.

Therefore the REKNOW License Server has been updated to version 3.1.0. The new download is available on our website in the download area.

- **New option in standard „ISO 5006“**

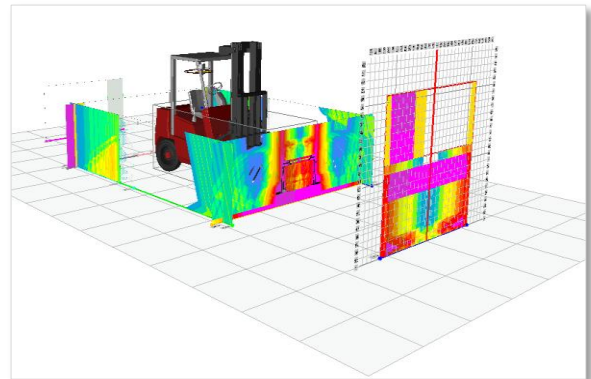

When using an unlocked profile (only applied), you can now use additional options in the profile settings panel to control the evaluation of each sector and each RB. If you activate the calculation-option but deactivate the evaluation-option, the maskings of the corresponding sector or RB will be calculated but not evaluated.

The advantage of this option is that you can see all maskings when using a profile where a certain sector will not be calculated (e.g. excavator; sector E) without affecting the evaluation results. This allows you to visually evaluate the masking and to see how they develop.

- **Addition standard - DIN EN 16307**

We implemented the next standard, the DIN EN 16307 into **EMM-Check 4**. The new standard adapts the ISO 13564 to analyze forklift trucks for the European market.

- **Save the date**

Please note the following dates:

- Release of version 4.0.6.0 on 3rd of July 2015
- EMM-Check Customer Days 2015
 - **16th of September 2015, Hannover**
 - **23rd of September 2015, Stuttgart**
- Agritechnica 2015
 - **8th till 14th of November 2015, Hannover**
 - **REKNOW on the booth of MEKRA Lang**
- Bauma 2016
 - **11th till 17th of April 2016, Munich**
 - **REKNOW on the booth of MEKRA Lang**
